

QUESTION: WHAT TYPE OF PACKAGE WILL A HANG TAB ADHERE TO?

Answer #1: **Typically a hang tab will adhere to "most flat" surfaces.**

- Here are "some" surfaces that might be an exception:

- * Some shrink wrap films (such as films with plasticizers)
- * Some rounded surfaces
- * Some uneven or odd shaped surfaces
- * Some textured surfaces

Answer #2: **We suggest testing a sample hang tab on your product before deciding on a hang tab; this is always the best determining factor when trying to find the right hang tab for your product.**

QUESTION: WHAT TYPE OF SHRINK FILM WILL A HANG TAB ADHERE TO?

Answer #1: **Print grade shrink films.**

Answer #2: **We suggest testing a sample hang tab on your product before deciding on a hang tab; this is always the best determining factor when trying to find the right hang tab for your product.**

QUESTION: HOW MUCH WEIGHT WILL A CERTAIN HANG TAB HOLD?

Answer #1: **See the "Part Info" link on our home website page (or see pages 29 & 30 in our company catalog to determine the recommended weights for each tab we sell, but remember to consider FAQ #1 and #2 before purchasing a hang tab.**

QUESTION: WHAT IS THE DIFFERENCE BETWEEN "LOOSE PIECE", "SHEETED" AND HANG TABS "ON ROLLS"?

Answer #1: **LOOSE PIECE** hang tabs were designed for easy access for employees in a store system. They come loose in a box so the employee can grab a hand full of tabs at a time for use as repair tabs or whatever is needed.

Answer #2: **SHEETED** hang tabs were designed for hand application either in a store or in a manufacturing environment. These tabs come clustered on a sheet of paper liner. They have multiple quantities per sheet and it is simple to pull off at a time for adhering to packages.

Answer #3: **ON ROLLS** hang tabs are designed for automatic machine application.
